Source Four LEDTM FRESNEL

From the stage to the studio and everywhere in between, you've never seen a Fresnel like this. Backed up by ETC's Source Four® LED Series 2 light engine, it goes way beyond the capabilities of typical LED Fresnels.

A soft touch

The Source Four LED adapter produces light-washes with beautiful, soft edges. Its smooth light blends uniformly from one fixture to another, evenly illuminating any object or person.

A new frame of mind

The Fresnel lens uses the high-quality optics that ETC fixtures are known for. And you can frame and mold the light to meet your specifications using barn doors and third-party attachments.

Family ties

The Fresnel adapter is just one of many tools that make the Source Four LED Series 2 light engine so practical. Simply by swapping out the adapter, attachment or accessory, you can transform your Source Four LED Series 2 luminaire from a zoomable spotlight to a cyc light to a Fresnel or dozens of other fixture options.

Pick your palette

When paired with the Source Four LED Series 2 Lustr® color engine, the Source Four LED Fresnel delivers the most expansive range of bold colors you can get from an LED source. Used with the Tungsten HD light engine, the Fresnel's light closely matches traditional tungsten lighting, with adjustable warm-white (2700 to 4500K) light. And the Daylight HD light engine brings the feel of sunlight to your application, outputting tunable cool-white (4000 to 6500K) light. But the control doesn't just stop at color temperature. You can further fine-tune the quality of the white light for the most accurate look.

Camera ready

A great tool for the stage, the Source Four LED Fresnel also outperforms other Fresnels designed for studio use. It's brighter, with more precise optics, and the flicker-free function of the Lustr, Daylight HD and Tungsten HD light engines makes it a must-have for broadcast use.
